

Behind the Network

A simple four-week LinkedIn pilot to explain the infrastructure behind connectivity.

Concept proposal only — not commissioned, approved, or published TAWAL content.

Marketing objective: Publish one post per week for four weeks and record impressions, engagement and link clicks. The broader aim is to make TAWAL's public infrastructure role clearer to relevant B2B audiences. A proposed +10% average-impressions target appears in the report only if a comparable baseline is available; it is a planning target, not a forecast.

Target audience

Network and connectivity teams first; property owners, venue managers and large-project stakeholders second. This is a student-proposed audience, not a confirmed TAWAL segmentation.

Key message

The services people use every day depend on physical digital infrastructure. TAWAL provides infrastructure and related services that organizations can use to support connectivity.

Content pillars

1. Physical side of connectivity
2. Infrastructure sharing
3. Indoor coverage
4. Starting a conversation

Channel, CTA and KPIs

Channel: LinkedIn, one post per week. Link to an existing approved TAWAL page.

CTA: Explore solutions, learn about colocation, explore IBS, or contact TAWAL.

KPIs: impressions, reactions/comments/shares, engagement rate, link clicks, follower change and relevant inquiries where tracking is available.

Post copy and visuals are concept drafts. Check current service descriptions with technical and communications teams before any real use. Source details are included in the project's Sources and References file.

BEHIND THE NETWORK

One site. Shared use.

Colocation lets more than one customer use space on a telecom site.
